University Project

- **Senior Project CS190/191:** My team did a Full Stack for Nonprofit Webpage called "Harm Reduction Services." I focused on backend developering / QA contributor. We used Node.js, Express, MongoDB, Jest, Supertest, React, and Cloudinary.
 - Contributed to a production style web platform for a nonprofit client delivering staff tools for news, events, media, reports, inventory, donations, and account management.
 - Focused on backend quality and test automation, writing Jest and Supertest suites to verify route behavior, controller logic, session handling, and failure recovery.
 - Built reliable admin seeding functionality and automated tests to ensure the application can be initialized safely across local and deployment environments.
 - Improved maintainability by isolating external services in tests, standardizing error handling, and documenting setup steps, test commands, and expected outputs.
 - Worked in a team based agile environment using Jira, Git branches, pull requests, code reviews, sprint deliverables, and client feedback.

Additional Information

- Computer Science Languages I know:
 - Java, C, Python, JavaScript, SQL, HTML/CSS, and Assembly
- Software I have used:
 - Eclipse, Visual Studio code, MobaXterm, PuTTY, Cisco Packet Tracer, Jupyter Notebook, Node.js, Express, MongoDB, Jest, Supertest, React, Cloudinary, jGRASP, MongoDB Compass, and Wireshark.
